

Day-2 Gesture Recording and Landmark Collection

Date: 16/01/2026

Time Taken: Approximately 3 hours

Tasks Completed:

1. Created folder structure for data storage:

- data/raw_landmarks/selam/
- data/raw_landmarks/awo/
- data/raw_landmarks/ameseginalehu/
- data/raw_landmarks/ay/

2. Developed collect_landmarks.py to capture hand landmarks using MediaPipe and save them to CSV files.

3. Tested the script with the first gesture (selam):

- Pressed 's' to start recording
- Recorded ~40 frames (~1.3 seconds)
- Verified CSV creation

4. Recorded 3–5 samples for each gesture:

- Selam(ሰላም)
- awo (አዎ)
- ameseginalehu(አመሰግናለሁ)
- ay(አይ)

Problems Faced:

1. Green dots not showing during recording

- Cause: Visualization removed to focus on data collection
- Solution: Confirmed that landmarks were still being saved in CSV files

2. Low-quality PC webcam

- Cause: Laptop webcam resolution is low
- Solution: Adjusted lighting, slowed gesture motion, hand centered in frame

Outcome:

- Successfully recorded 5 samples per gesture
- CSV files verified and contain correct landmark data
- Day 2 tasks fully completed, ready for Day 3
